

TECNOR is a manufacturing company specialized in the production of custom design fittings for high-pressure hydraulic hoses.

Our customers are distributors and Original Equipment Manufacturers (OEMs) located in Europe and operating all over the world.

The custom design manufacturing is our main process but this only one of the capabilities and services offered to our customers. Our greatest strength is to offer a complete and flexible manufacturing solution to supply customers with final products. Starting from the steel bar, through machining and adding annealing, bending, assembling and plating, TECNOR provide customers with finished products in their final sales packages, ensuring the expected quality level.

Established as family owned company in the early 60's, TECNOR is still inspired by a deep passion for the mechanical industry. TECNOR has a high and specific level of technical knowledge and expertise in hydraulic, developed in decades of collaborations as premier supplier for major worldwide companies in the hydraulic industry, built with strong and mutually beneficial relationships with customers and strategically chosen suppliers.

The Management is always attentive to analyze the business context in which TECNOR operates, in order to ensure continuous improvement in line with customer needs and with the technical progress, observing the strategies of competitors, collaborating with strategic suppliers and involving the staff.

The primary objective of TECNOR has always been to supply products with the highest quality and performance level, in compliance and exceeding the applicable requirements of both the product (standards, customer requirements), the organization (safety, environment) and the service (delivery time and shipping methods).

To achieve this objective, the Management ensures and provides the availability of necessary resources (human, technical and economic) with high skills and knowledge.

The main tool to achieve business success is the involvement and participation of internal staff and suppliers so that they are aware of their strategic role in the realization of the product and provided to the customer service.

The company objectives are communicated and shared with the staff, which is essential in suggesting improvements, in determining the quality of the product and the service level, in improving the business efficiency.

The Management promotes the continuous integration of the Quality Management System with other Company Systems (Health and Safety, Administrative, Environment, Privacy) so that every process is designed and operated according to all relevant aspects with 360-degree assessment, using the analogies and strengths of each system in a cycle of global organizational improvement.

The Management promotes accident prevention in the field of safety and environment, through continuous information and training, the definition of appropriate operating procedures, the provision of technical resources in compliance with applicable laws and regulations, the definition of appropriate emergency plans and responses.
